INTRODUCTION

Context has long been recognised as a key factor in memory retrieval, yet the ways in which it has been studied as well as the effects it produces are diverse.

We ask:

1. When and why do context effects emerge?

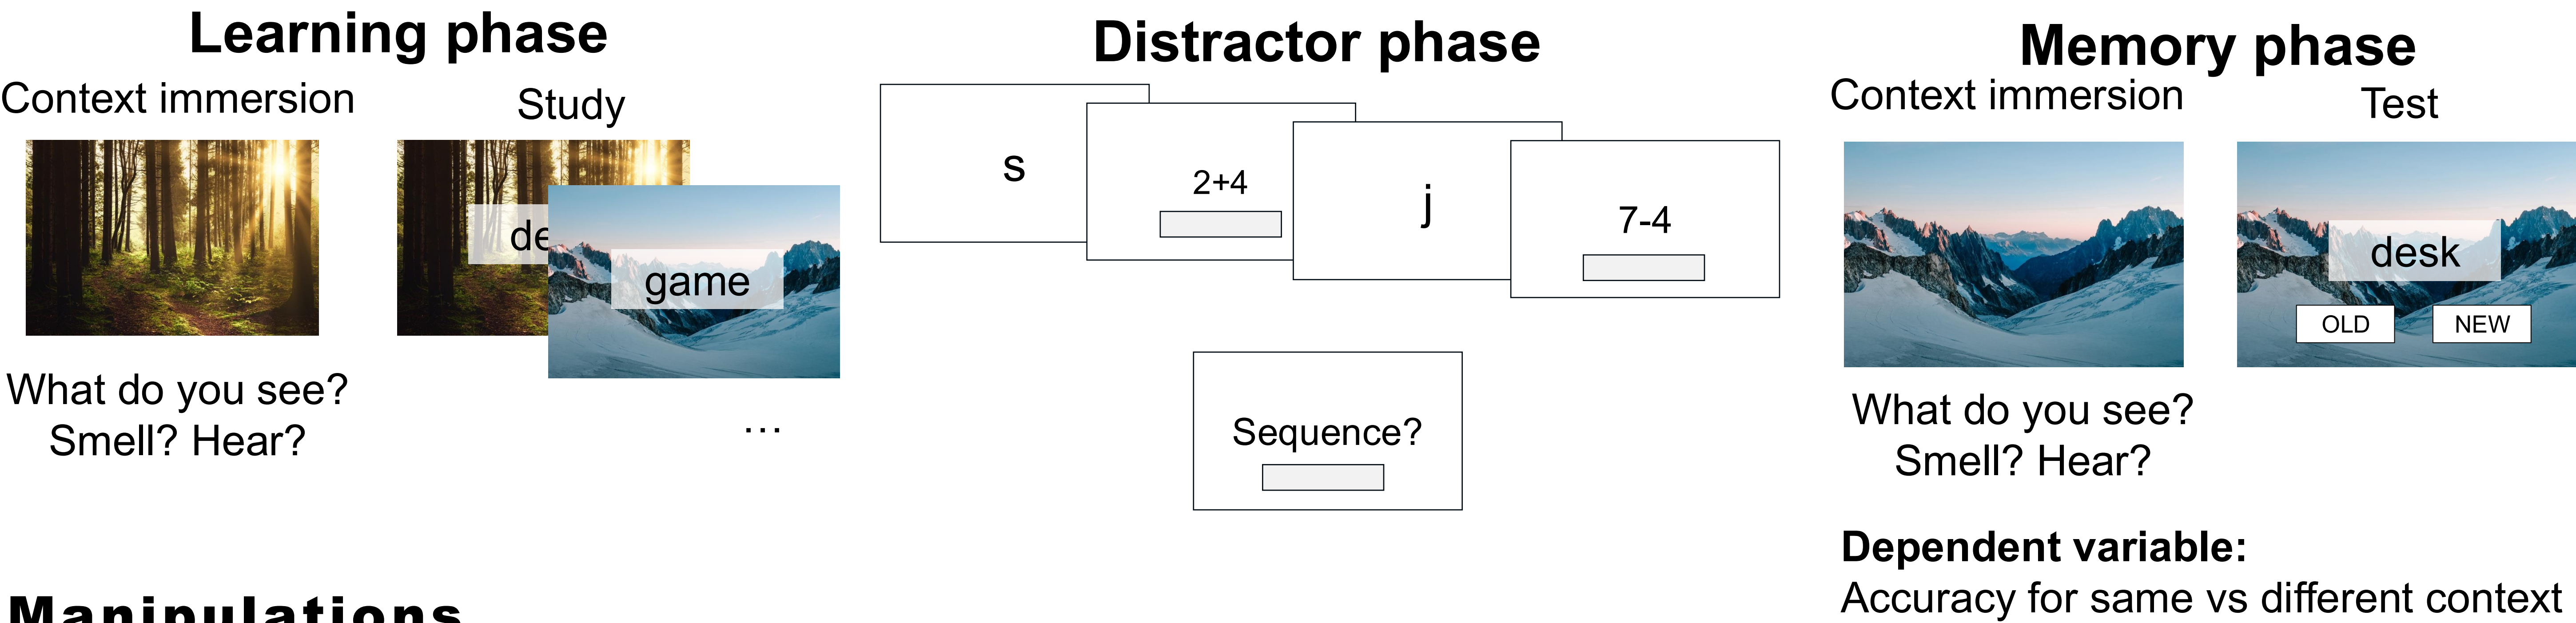

MAIN GOAL

When does being in the same context make remembering easier?
And what is context anyway?

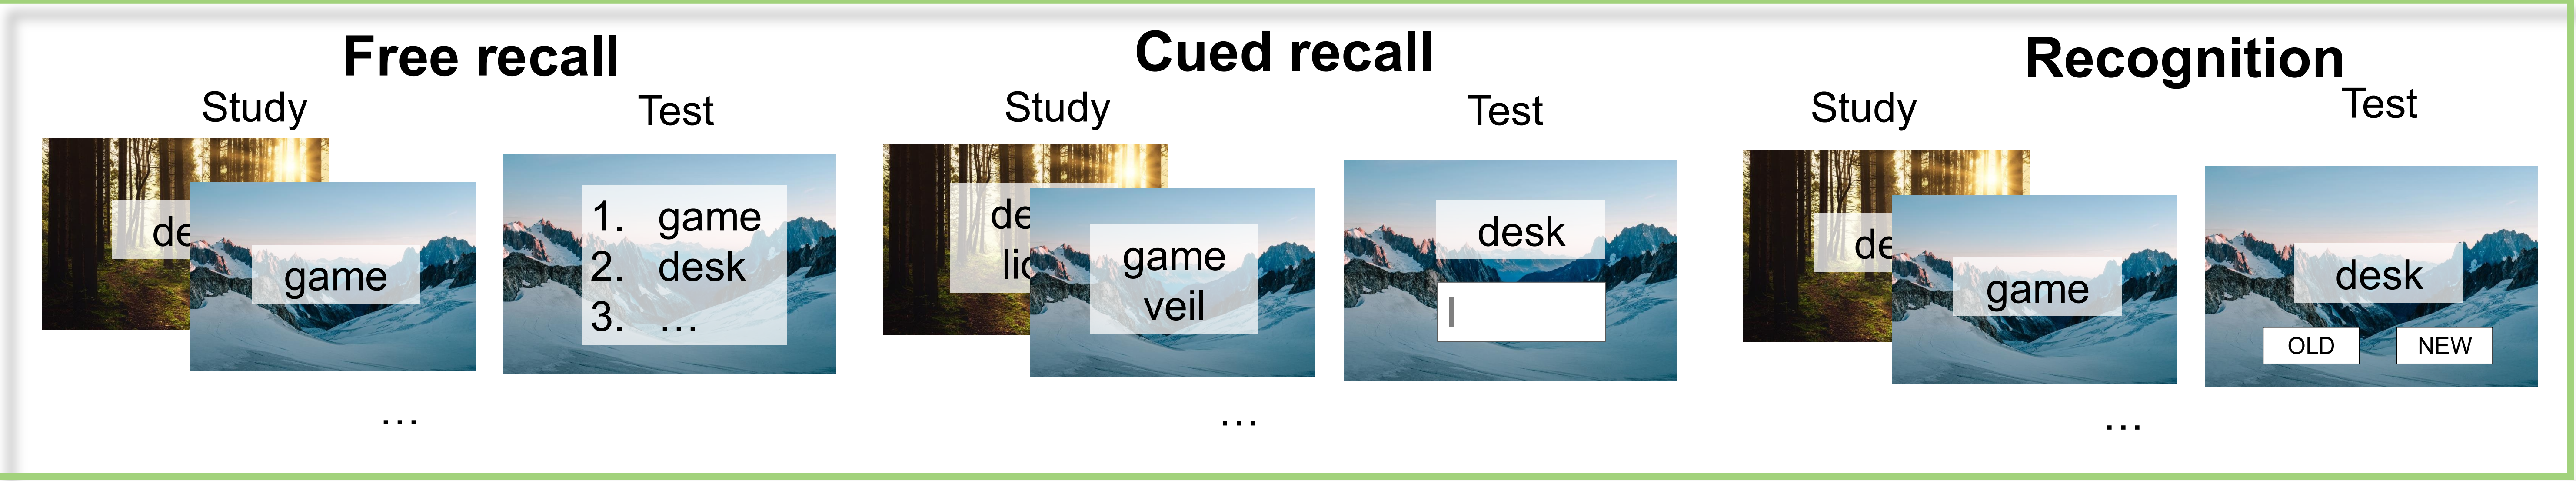

METHODS

Experimental design

Manipulations

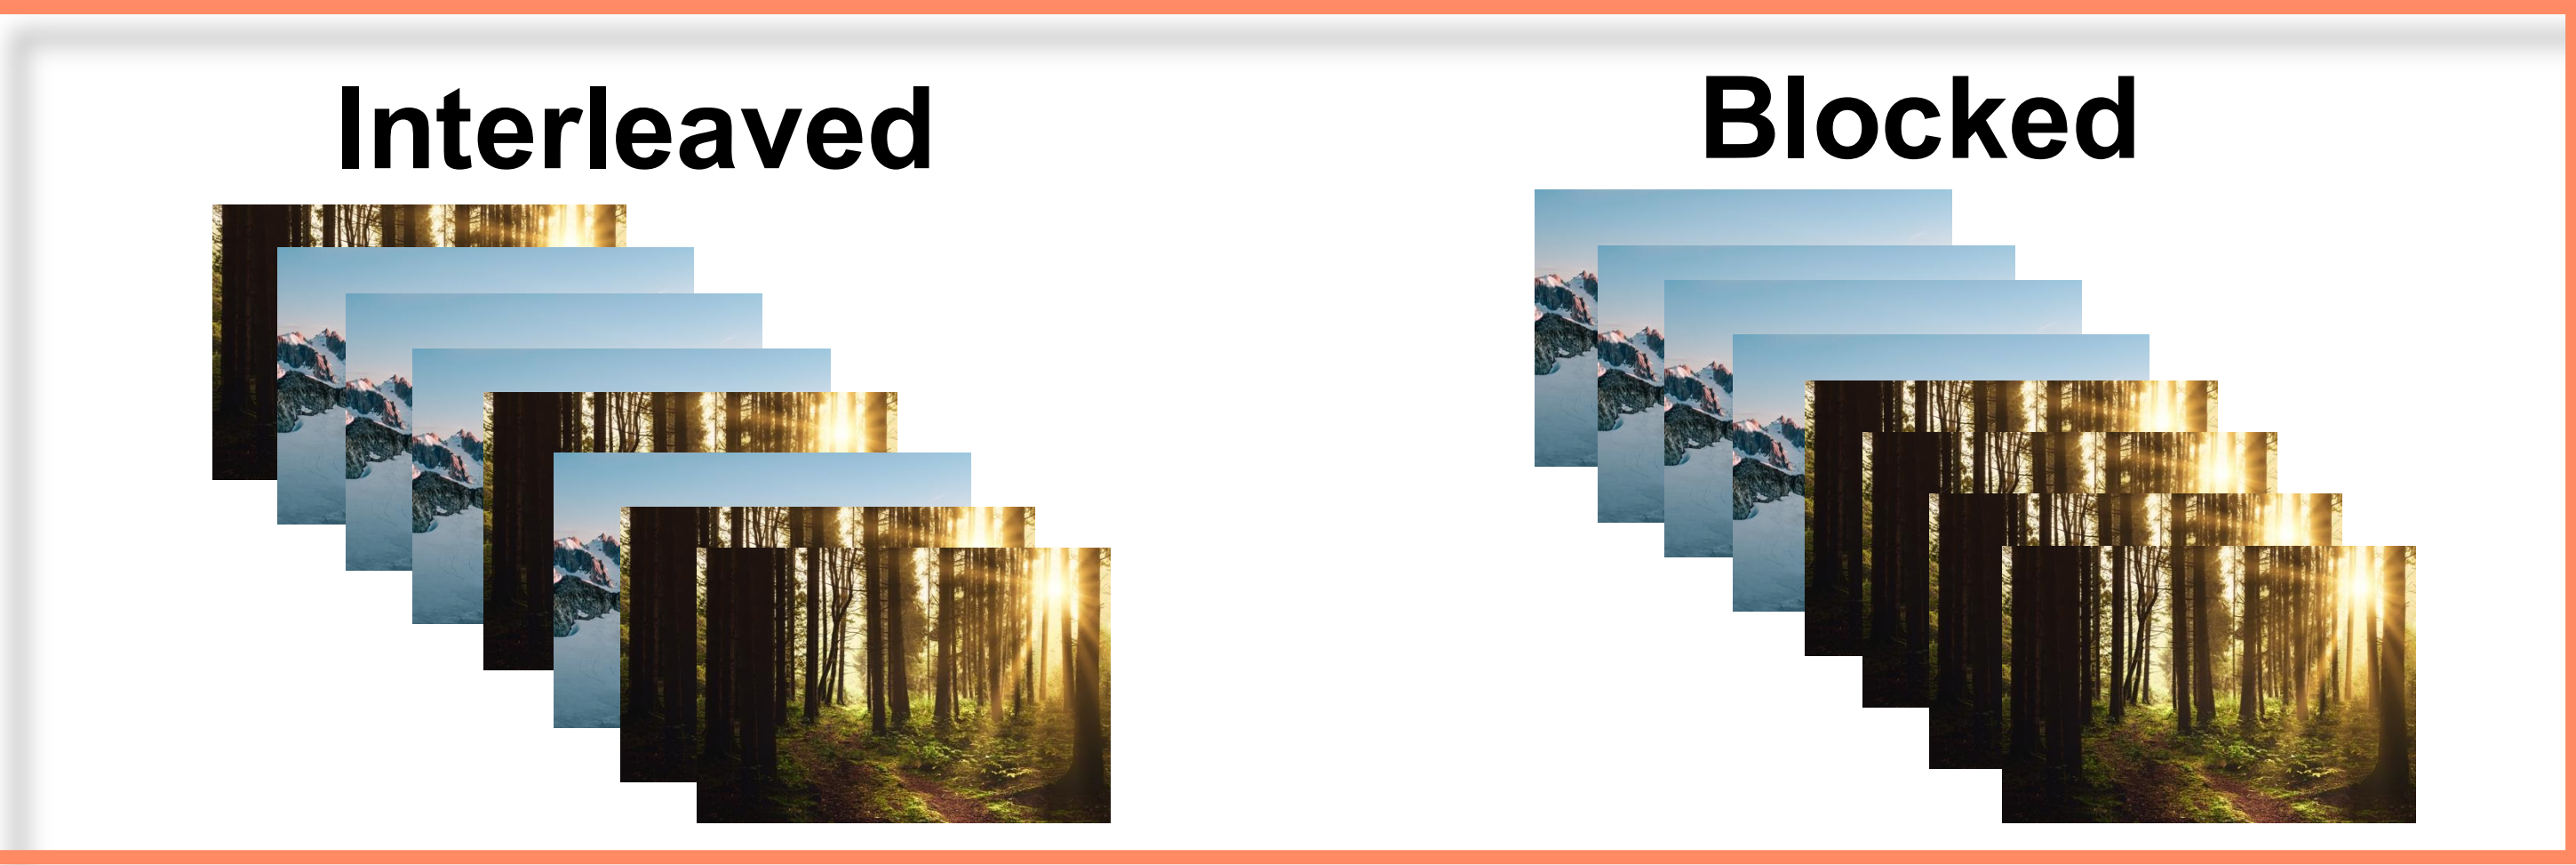

Memory test

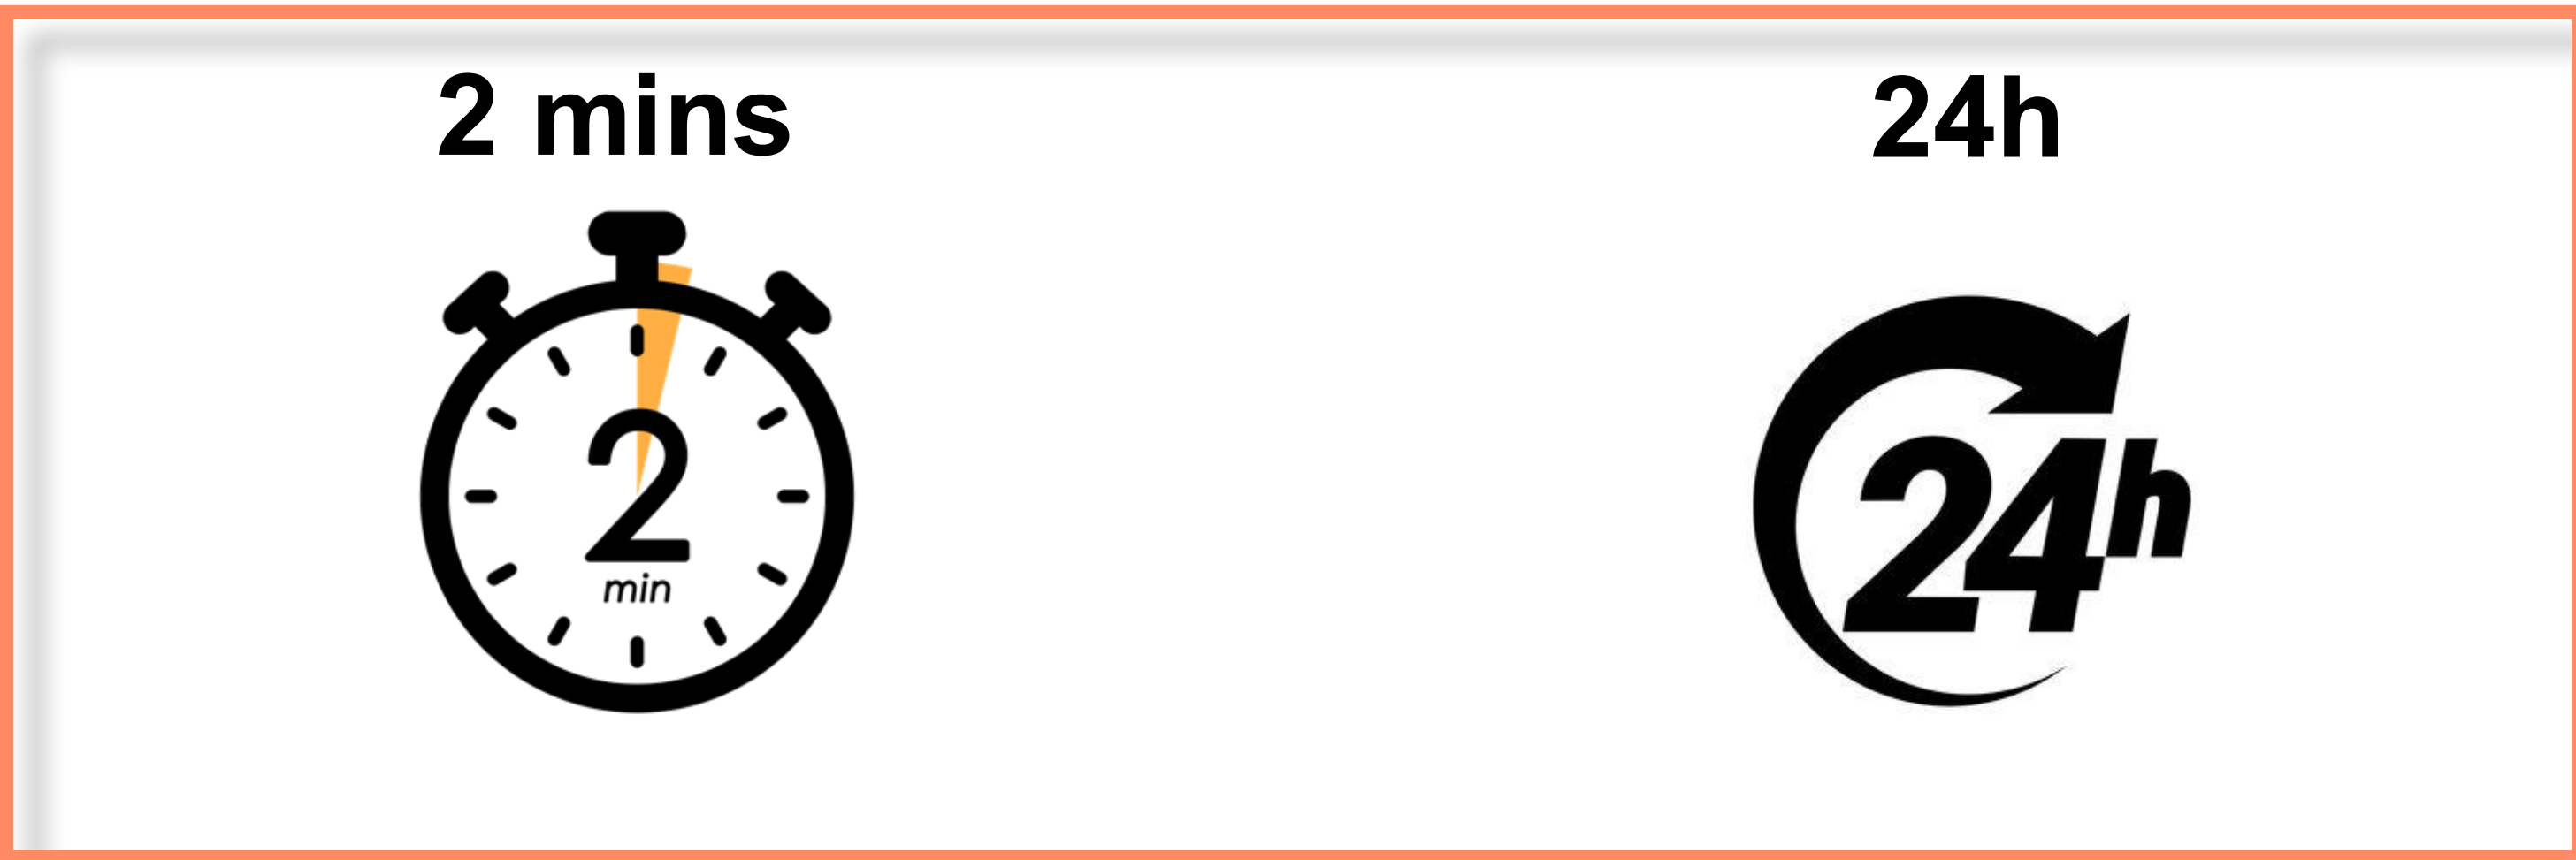

Attention

Item	Context (& item)	Binding
"Please write a sentence containing the item."	"Please write a sentence describing an aspect of the location you are seeing."	"Please write a sentence about how you could use the item you were just shown in the location you are seeing."

Presentation

Delay

Number of items per context

1	5	10
